

**FOR IMMEDIATE RELEASE****HENRY SCHEIN MEDICAL SYSTEMS ANNOUNCES UPGRADES TO MICROMD®'S EPAYMENTS SOLUTION, ENABLING CUSTOMERS TO ACCEPT EMV CHIP CARDS AND CONTACTLESS PAYMENTS****With Enhancements to MicroMD® Practice Management Software's Payment Processing Solution, Medical Practices Can Use Smart Chip Technology to Reduce Fraud Liability**

**MELVILLE, N.Y. August 10, 2016--** Henry Schein Medical Systems, Inc., a subsidiary of Henry Schein, Inc., announced today that its practice management software, MicroMD®, will enable physicians to accept EMV (Europay, MasterCard® and Visa®) chip credit and debit cards and contactless payments. New upgrades to MicroMD's integrated payment processing solution, ePayments, will help reduce customers' fraud liability since merchants that do not accept EMV chip cards can be found liable for fraudulent card transactions, per rules instituted by MasterCard, Visa, American Express and Discover on Oct. 1, 2015. These rules, as reported by CreditCards.com, indicated that "in-store counterfeit fraud liability shifted to the party—either the card issuing financial institution or the merchant—that had not adopted EMV technology. Before, credit card issuers were primarily responsible for covering fraud affecting consumer accounts." (CreditCards.com).

Henry Schein Medical Systems partnered with Moneris, one of North America's largest payment processors and its long-time payment processing partner, to create the new EMV-ready version of the ePayments solution. The ePayments module is integrated with the MicroMD practice management solution, allowing medical practices to process patient card payments through the same system they use to manage other day-to-day business operations, instead of a separate, stand-alone credit card terminal. As a result, medical practices can reduce their costs, save time and streamline their accounting and back office operations.

"EMV chip card technology is a new and effective means of combating credit card fraud," said Heather Ansell, General Manager, Henry Schein Medical Systems, the developers of MicroMD. "Practitioners looking to adopt smart chip technology can use this new technology to help protect them from fraudulent transactions and the penalties associated with these transactions, as well as to streamline office operations."

Henry Schein customers using MicroMD's ePayments solution will be equipped to accept Near Field Communication (NFC)-based mobile payments, or digital wallets, such as Apple Pay™ and Samsung Pay™. Each EMV card has a small computer chip on it, which generates a unique code each time the card is used, providing better protection against fraud than a magnetic strip card. Magnetic strips contain a standard set of data necessary to make purchases, which do not change, making it easier for fraudsters to gain access.
